SUBJECT INDEX

Analysis
and design of four-terminal Si pressure sensor at centre of diaphragm, 49
Anionic substances
polypyrrole electrode as detector of, 455
Antimony
Sb-doped stannic oxide-based thick-film gas sensors, 77
Arsine detection
Pd-gate MOS devices for, 333
Automatic testing equipment
application of multiple regression methods and, to characterization of 'smart' sensors, 235

Carbon monoxide
gas sensors, low power thick film, 441
Catalysts
commerical supported Ni, d.c. conductivity used as sensor for high-temperature H_2 chemisorption on, 159
Chalcogenide glasses
electrochemical ion-selective sensors based on, 275
CHEMFET
selective gates, preparation of, by thin silica layer grafting and their behaviour, 245
Chemical selectivity
of field-effect transistors, 121
Chemical sensors
use of polymer materials as sensitive elements in physical and, 129
CMOS flow sensor
with constant chip temperature (CCT) operation, novel, 9
Constant chip temperature (CTT)
novel CMOS flow sensor with, operation, 9

D.c. conductivity
uses as sensor for high-temperature H_2 chemisorption on commercial supported Ni catalysts, 159
Density analysis
noise power spectrum, of planar Ag/AgCl electrodes, 185

Electrical analogy
study of thermal fields of zero-method heat flux sensor by, 91
Electrical characteristics
of planar phthalocyanine thin film gas sensors, 389
Electrochemical gas sensors
solid-state, 107
Electrochemical ion-selective sensors
based on chalcogenide glasses, 275
Electrode(s)
Ag/AlCl, noise power spectrum density analysis of, 185
polypyrrole, as detector of anionic substances, 455
Electrolytes
potentiometric gas sensors based on fast solid, 449
Electro-optical performance
of large-area Si sensors for radiative energy signals, 23

Fiber-optic catheter-tip sensor
based on photoelastic effect, 35
Field-effect transistors
chemical selectivity of, 121
Flow meter
floating-ball, extremely low-power bipolar integrated impedance-variation detector for use in, 193
Flow sensor
novel CMOS, with constant chip temperature (CCT) operation, 9
Fluorescent materials
fibre-optic-addressed temperature transducers using solid-state, 375
Force (pressure) sensor
thick-film fabrication methods for, assessment of, 57

Gas-dosed tin oxide
fundamental characterization of clean and, 101
Gas-sensing characteristics
of semiconducting materials based on In_2O_3 depending on composition changes, 285
Gas sensor(s)
CO, low power thick film, 441

© Elsevier Sequoia/Printed in The Netherlands

p-type semiconductor thick film, 263
planar phthalocyanine thin film, electrical characteristics of, 389
potentiometric, based on fast solid electrolytes, 449
Sb-doped stannic oxide-based thick-film, 77
semiconductor, selectivity in, 425
solid-state electrochemical, 107

Heat flux sensor
zero-method, study of thermal fields of, by electrical analogy, 91
High temperature(s)
H_2 chemisorption, d.c. conductivity used as sensor for, on commercial supported Ni catalysts, 159
humidity measurement at, 145
Humidity measurement
at high temperatures, 145
Humidity sensor
capacitive, with very fast response time and very low hysteresis, 291
Hydrocarbons
thin metal film–oxide–semiconductor structures with temperature-dependent sensitivity for unsaturated, 255
Hydrogen chemisorption
d.c. conductivity used as sensor for high-temperature, on commercial supported Ni catalysts, 159
Hysteresis
capacitive humidity sensor with very fast response time and very low, 291

Impedance-variation detector
extremely low-power bipolar integrated, for use in floating-ball flow meter, 193
Indium
semiconducting materials based on In_2O_3, gas-sensing characteristics of, depending on composition changes, 285
Ion-selective field-effect transistor
flow-through, 297
Ion-selective sensors
electrochemical, based on chalcogenide glasses, 275
ISFET sensor
use of multi-, fabricated in single substrate, 463

Lanthanum fluoride
potentiometric solid-state oxygen sensor using, operative at room temperature, 415

Magnetorestrictive strain gage
sensitive, wide frequency range, 323
Micro gears
and turbines etched from Si, 341
Microsensors
thermal management of integrated, 303
MIS structure
Pd–SnO_x, used for oxygen detection, sensing behavior of, 349
MOS devices
Pd-gate, for arsine detection, 333
Moving-strip-illuminated semiconductor panel
millimeter wave attenuation through and reflection coefficient from, 367
Multiple regression methods
and automatic testing equipment, application of, to characterization of 'smart' sensors, 235

Nickel catalysts
d.c. conductivity used as sensor for high-temperature H_2 chemisorption on commercial supported, 159
Noise power
spectrum density analysis of planar Ag/AgCl electrodes, 185

Oxygen detection
Pd–SnO_x MIS structure used for, sensing behavior of, 349
Oxygen sensor
potentiometric solid-state, using lanthanum fluoride operative at room temperature, 415

Palladium
Pd-gate MOS devices for arsine detection, 333
–SnO_x MIS structure used for oxygen detection, sensing behavior of, 349
Photoelastic effect
fiber-optic catheter-tip sensor based on, 35
Phthalocyanine
thin film gas sensors, electrical characteristics of planar, 389

Physical sensors
use of polymer materials as sensitive elements in, 129
Piezoelectric films
for transducers, SOLEF® PVDF biaxially oriented, 207
Piezoelectric polymer
pressure sensors, 225
Polymer
piezoelectric, pressure sensors, 225
Polymer materials
as sensitive elements in physical and chemical sensors, use of, 129
Polypyrrole electrode
as detector of anionic substances, 455
Pressure sensor(s)
analysis and design of four-terminal Si, at centre of diaphragm, 49
piezoelectric polymer, 225
thick-film fabrication methods for force, assessment of, 57
PVDF
SOLEF®, biaxially oriented piezo- and pyroelectric films for transducers, 207
Pyroelectric films
for transducers, SOLEF® PVDF biaxially oriented, 207

Radar detection
for automatic control of trains, 313
Radiation meter design
digital, 405
Radiative energy signals
large-area Si sensors for, electro-optical performance of, 23
Reflection coefficient
from moving-strip-illuminated semiconductor panel, millimeter wave attenuation through and, 367
Response time
capacitive humidity sensor with very fast, and very low hysteresis, 291

Scanning electron microscopy
of geometry of V-groove structures, 1
Selective gates
preparation of CHEMFET, by thin silica layer grafting and their behaviour, 245
Selectivity
in semiconductor gas sensors, 425
Semiconducting materials
based on In_2O_3, gas-sensing characteristics of, depending on composition changes, 285
Semiconductor
gas sensors, selectivity in, 425
p-type thick film gas sensor, 263
thermoelectric devices, fast, 179
thin metal film–oxide–, structures with temperature-dependent sensitivity for unsaturated hydrocarbons, 255
Semiconductor panel
moving-strip-illuminated, millimeter wave attenuation through and reflection coefficient from, 367
Sensing behavior
of Pd–SnO_x MIS structure used for oxygen detection, 349
Silica layer grafting
preparation of CHEMFET selective gates by thin, and their behaviour, 245
Silicon
micro gears and turbines etched from Si, 341
Silicon sensor(s)
pressure, analysis and design of four-terminal, at centre of diaphragm, 49
for radiative energy signals, electro-optical performance of large-area, 23
Silver
noise power spectrum density analysis of planar Ag/AgCl electrodes, 185
'Smart' sensors
application of multiple regression methods and automatic testing equipment to characterization of, 235
SOLEF®
PVDF biaxially oriented piezo- and pyroelectric films for transducers, 207
Stannic oxide
-based, Sb-doped, thick-film gas sensors, 77
Strain gage
sensitive, wide frequency range magnetorestrictive, 323

Temperature-dependent sensitivity
for unsaturated hydrocarbons, thin metal film–oxide–semiconductor structures with, 255
Temperature transducers
fibre-optic-addressed, using solid-state fluorescent materials, 375

Thermal fields
of zero-method heat flux sensor by electrical analogy, study of, 91
Thermal management
of integrated microsensors, 303
Thermoelectric devices
fast semiconductor, 179
Thick-film fabrication methods
for force (pressure) sensors, assessment of, 57
Tin
Pd–SnO_x MIS structure used for oxygen detection, sensing behavior of, 349
Tin oxide
clean and gas-dosed, fundamental characterization of, 101
Trains
radar detector for automatic control of, 313
Transducers
fibre-optic-addressed temperature, using solid-state fluorescent materials, 375
SOLEF® PVDF biaxially oriented piezo- and pyroelectric films for, 207
Transistor(s)
chemical selectivity of field-effect, 121
flow-through ion-selective field-effect, 297
Turbines
etched from Si, micro gears and, 341

V-groove structures
scanning electron microscopy of geometry of, 1

Wave attenuation
millimeter, through and reflection coefficient from moving-strip-illuminated semiconductor panel, 367

Zero-method heat flux sensor
study of thermal fields of, by electrical analogy, 91
